## SERIE Y TRANSFORMADA DE FOURIER

### Funciones ortogonales. Series de Fourier. Eiemplos

### **FUNCIONES ORTOGONALES**

Secuencia infinita  $\{\phi_n(x)\}$ integrable en [a,b] y

$$\int_{a}^{b} \phi_{i}(x)\phi_{j}(x) dx = 0, \quad i \neq j$$

Supongamos que existe

$$\int_{a}^{b} f(x) \, dx$$

ĺ

$$f(x) = \sum_{n=1}^{\infty} c_n \phi_n(x)$$

$$c_3 = ?$$

$$f(x)\phi_3(x) = \sum_{i=1}^{\infty} c_n \phi_n(x)\phi_3(x)$$

$$\int_{a}^{b} f(x)\phi_{3}(x) dx =$$

$$\int_{a}^{b} \sum_{\infty}^{\infty}$$

$$\int_{a}^{b} \sum_{i=1}^{\infty} c_n \phi_n(x) \phi_3(x) dx =$$

$$\sum_{i=1}^{\infty} \int_{a}^{b} c_n \phi_n(x) \phi_3(x) dx =$$

$$c_3 \int_{a}^{b} \phi_3^2(x) dx$$

$$c_k = \frac{\int_a^b f(x)\phi_k(x) dx}{\int_a^b \phi_k^2(x) dx}$$
 (1)

## Definición

Producto interno:

$$\langle \phi_i, \phi_j \rangle = \int_a^b \phi_i(x)\phi(j)(x) dx$$

Con  $c_k$  definida por (1):

$$f(x) \sim \sum_{n=1}^{\infty} c_n \phi_n(x) = F(x)$$

F(x) es la **representación de Fourier** de f(x) con respecto de

 $\{\phi_n(x)\}.$ 

Se puede demostrar:

$$\int_{a}^{b} \left[ f(x) - \sum_{k=1}^{n} c_k \phi_k(x) \right]^2 dx \le$$

$$\int_{a}^{b} \left[ f(x) - \sum_{k=1}^{n} d_k \phi_k(x) \right]^2 dx$$

1

### Caso especial:

 $\{\cos x,\cos 2x,\cos 3x,\cdots,\\ \sin x,\sin 2x,\sin 3x,\cdots\}$  ortogonales en  $[-\pi,\pi].$ 

Por ejemplo:

$$\int_{-\pi}^{\pi} \cos mx \cos nx \, dx =$$

$$\frac{1}{2} \int_{-\pi}^{\pi} \left[ \cos((m+n)x) + \cos((m-n)x) \right] dx =$$

$$\frac{1}{2} \left[ \frac{\sin((m+n)x)}{m+n} + \frac{\sin((m-n)x)}{m-n} \right]_{x=-\pi}^{\pi}$$

#### Resultado clave:

Supongamos que f(x) sea suave a tramos en  $[-\pi,\pi]$ , y que

$$F(x) = \sum_{n=0}^{\infty} a_n \cos nx + \sum_{n=0}^{\infty} b_n \sin nx$$

es la representación de Fourier de f(x). Entonces, para  $x \in [-\pi, \pi]$ :

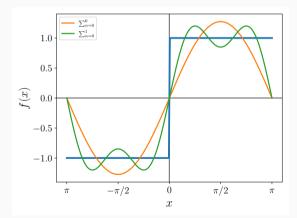

$$F(x) = \frac{f(x^{+}) + f(x^{-})}{2}$$

## Ejemplo:

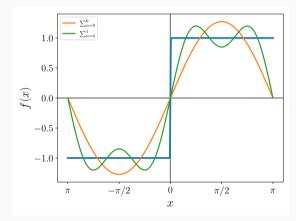

= 0

$$f(x) = \begin{cases} -1, & -\pi \le x < 0 \\ 1, & 0 \le x < \pi \end{cases}$$

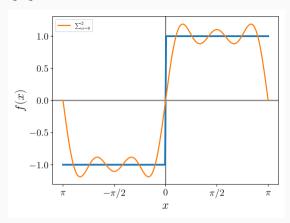

$$F(x) = \frac{4}{\pi} \sum_{n \text{ par}}^{\infty} \frac{\sin nx}{n} = \frac{4}{\pi} \sum_{n=0}^{\infty} \frac{\sin(2n+1)x}{2n+1}$$
$$= \frac{4}{\pi} \left( \sin x + \frac{\sin 3x}{3} + \frac{\sin 5x}{5} + \dots \right)$$

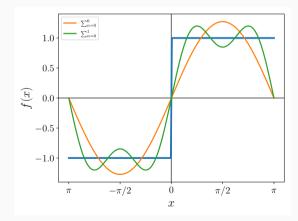

$$F(x) = \frac{4}{\pi} \sum_{n \text{ par}}^{\infty} \frac{\sin nx}{n} = \frac{4}{\pi} \sum_{n=0}^{\infty} \frac{\sin(2n+1)x}{2n+1}$$
$$= \frac{4}{\pi} \left( \sin x + \frac{\sin 3x}{3} + \frac{\sin 5x}{5} + \dots \right)$$

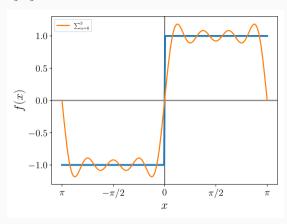

Agregando más términos:

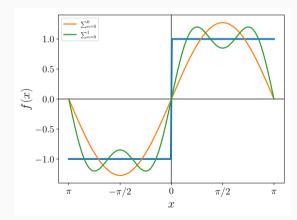

$$F(x) = \frac{4}{\pi} \sum_{n \text{ par}}^{\infty} \frac{\sin nx}{n} = \frac{4}{\pi} \sum_{n=0}^{\infty} \frac{\sin(2n+1)x}{2n+1}$$
$$= \frac{4}{\pi} \left( \sin x + \frac{\sin 3x}{3} + \frac{\sin 5x}{5} + \dots \right)$$

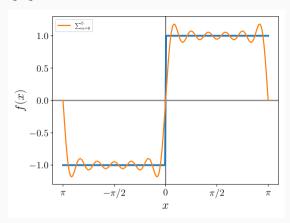

Agregando más términos:

$$F(x) = \frac{4}{\pi} \sum_{n \text{ par}}^{\infty} \frac{\sin nx}{n} = \frac{4}{\pi} \sum_{n=0}^{\infty} \frac{\sin(2n+1)x}{2n+1}$$
$$= \frac{4}{\pi} \left( \sin x + \frac{\sin 3x}{3} + \frac{\sin 5x}{5} + \dots \right)$$

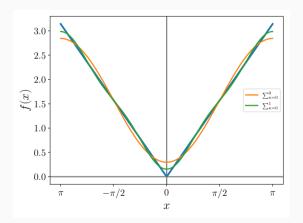

Agregando más términos:

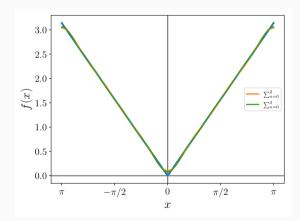

$$F_5(x) = \frac{4}{\pi} \left( \dots + \frac{\sin 9x}{9} + \frac{\sin 11x}{11} + \frac{\sin 13x}{13} \right)$$

$$f(x) = |x|, \quad -\pi < x < \pi$$
 
$$F(x) = \frac{\pi}{2} - \frac{4}{\pi} \sum_{n \text{ impar}}^{\infty} \frac{\cos nx}{n^2}$$

$$f(x) = |x|, \quad -\pi < x < \pi$$
 
$$F(x) = \frac{\pi}{2} - \frac{4}{\pi} \sum_{n \text{ impar}}^{\infty} \frac{\cos nx}{n^2}$$

# Comparación con serie de potencias:

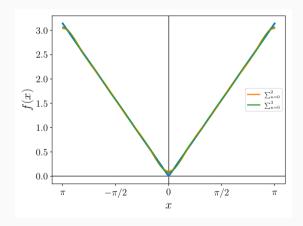

$$e^{x} = \sum_{n=0}^{\infty} \frac{x^{n}}{n!}$$

$$= 1 + x + \frac{x^{2}}{2} + \frac{x^{3}}{6} + \frac{x^{4}}{24} + \frac{x^{5}}{120} + \cdots$$

4

$$f(x) = |x|, \quad -\pi < x < \pi$$

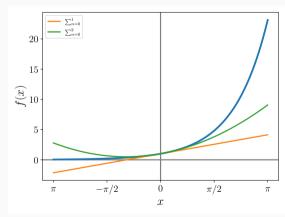

$$F(x) = \frac{\pi}{2} - \frac{4}{\pi} \sum_{n \text{ impar}}^{\infty} \frac{\cos nx}{n^2}$$

## Comparación con serie de potencias:

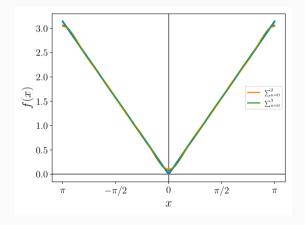

$$e^{x} = \sum_{n=0}^{\infty} \frac{x^{n}}{n!}$$

$$= 1 + x + \frac{x^{2}}{2} + \frac{x^{3}}{6} + \frac{x^{4}}{24} + \frac{x^{5}}{120} + \cdots$$

$$f(x) = |x|, \quad -\pi < x < \pi$$

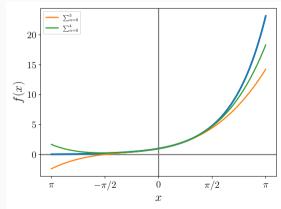

$$F(x) = \frac{\pi}{2} - \frac{4}{\pi} \sum_{n \text{ impar}}^{\infty} \frac{\cos nx}{n^2}$$

## Comparación con serie de potencias:

$$e^{x} = \sum_{n=0}^{\infty} \frac{x^{n}}{n!}$$

$$= 1 + x + \frac{x^{2}}{2} + \frac{x^{3}}{6} + \frac{x^{4}}{24} + \frac{x^{5}}{120} + \cdots$$
